

ASPR TRACIE Resources Overview Webinar 2019: Highlighted Resources

This document summarizes the major resources developed by ASPR TRACIE in 2019 that were highlighted during the ASPR TRACIE Resources Overview Webinar held on August 27, 2019. Visit asprtracie.hhs.gov/tracie-resources to review all ASPR TRACIE-developed resources.

HPP-HCC Specific Resources

[HCC Pediatric Surge Annex Template](#)

This template provides general headers and descriptions for a sample healthcare coalition (HCC) Pediatric Surge Annex Template. The resources used to develop this template include sample HCC plans and the Health Care Preparedness and Response Capabilities.

[HCC Surge Estimator Tool](#)

This data collection form concentrates on key measures that represent conventional and contingency capacity, with the understanding that crisis care may be required when these are insufficient. The information is submitted by each hospital to their coalition for aggregation for use in local, state, and federal planning. Click [here](#) for a 508 compliant version of this data collection form.

- [HCC Surge Estimator Tool Aggregator](#): As a companion to the HCC Surge Estimator Hospital Data Collection tool, this aggregator is intended to summarize the results from multiple HCC Hospital Data Collection workbook files to present an aggregate estimate at the coalition level, based on hospital members' responses. Click [here](#) 508 compliant version of this aggregator.

[Partnering with the Healthcare Supply Chain to Improve Disaster Response Tip Sheet & HCC Supply Chain Integrity Self-Assessment](#)

This tip sheet provides an overview of the emergency planning and response considerations of healthcare supply chain owners, operators, and end users, as well as insights for healthcare coalitions working with healthcare supply chain partners on preparedness, response, and recovery. The self-assessment checklist was developed to help HCCs examine the disaster readiness of their member organizations, with an emphasis on their individual supply chains. *HCCs are not required to use this tool if they have an alternate means or method of meeting the HPP FOA requirements.*

General Use Resources

No-Notice Incidents and Mass Casualty Trauma

- [No-Notice Incident Tip Sheets](#): These nine tip sheets were developed for hospitals and other healthcare facilities planning for no-notice incident response. The series is based on discussions ASPR NHPP and ASPR TRACIE had with healthcare personnel who were involved in the October 2017 mass shooting response in Las Vegas and supplemented with information from other recent no-notice incidents. While there is great variance in the scope and healthcare needs resulting from no-notice incidents, these tip sheets focus on some of the identified challenges.

ASPR TRACIE Resources Overview Webinar 2019: Highlighted Resources

- **[Mass Casualty Trauma Triage: Paradigms and Pitfalls](#)**: This white paper can help emergency medical system (EMS) medical directors and EMS systems planners and hospital emergency planners to key differences between “conventional” MCIs and mass violence events when: the scene is dynamic; the number of patients far exceeds usual resources; and usual triage and treatment paradigms may fail.

[Emergency Preparedness Information Modules for Nurses in Acute Care Settings](#)

This document describes a project to develop healthcare emergency preparedness information modules for nurses (EPIMN) and a framework to assess the impacts and outcomes associated with implementing such modules. It includes a summary and background of the project, links to EPIMN, a case study describing the development and impact of EPIMN, an economic framework based on EPIMN, and a calculator based on the economic framework.

[Disaster Behavioral Health: Self-care and Compassion Fatigue Modules](#)

ASPR TRACIE has worked closely with ASPR At-Risk Individuals, Behavioral Health & Community Resilience (ABC) interagency/ external partner working groups in every disaster recovery operation for the last four years. One continuous knowledge gap identified during this time has been the need for information for front-line healthcare and social services workers to use prior to a disaster to recognize and reduce their stress levels and maintain resilience during recovery. These modules are designed for healthcare workers in all settings, but primarily hospital-based providers.

[Engaging Healthcare System Partners in Medical Surge](#)

ASPR TRACIE worked with healthcare providers representing a variety of settings to understand their perceived levels of medical surge preparedness. These reports highlight findings from our work, answer frequently asked questions, and include strategies our stakeholders can incorporate into their own planning processes. Providers included in this project include: Accountable Care Organizations, Health Clinics, Home Health and Hospice Agencies, Practice-Based Primary Care Providers, and Urgent Care Centers.

[Federal Recovery Programs for Healthcare Organizations](#)

This tip sheet provides an overview of eligibility factors, program/grant requirements, and pre- and post-disaster federal financial opportunities (e.g., direct reimbursement and disaster-related loans) for healthcare facilities.
