Request Receipt Date (by ASPR TRACIE): March 17, 2020
Response Date: March 17, 2020
Type of TTA Request: Complex, Urgent

Request:

ASPR TRACIE received a request for pandemic plan templates and examples of comprehensive state pandemic plans.

Response:

ASPR TRACIE compiled the requested resources, plus additional relevant information in this document.

Please refer to CDC’s Coronavirus Disease 2019 webpage for the most up-to-date clinical guidance on COVID-19 outbreak management.

Checklist

This planning tool is intended to assist health care coalitions and their partners in assessing their preparedness for an influenza pandemic. It may also be used to orient the response as a pandemic begins. This checklist can help healthcare coalitions assess, create, and improve their pandemic preparedness and response plans.

Federal Plans and Guidance

These guidelines for the Centers for Disease Control and Prevention including information on State and Local public health planning requirements for influenza pandemic and information for State Governors and Senior State Officials.

These guidelines update Centers for Disease Control and Prevention recommendations on the use of non-pharmaceutical interventions to slow the spread of infectious respiratory diseases, including influenza.

This updated plan builds upon the 2005 Pandemic Influenza Plan and its subsequent updates, focusing on the seven domains of: surveillance, epidemiology, and laboratory activities; community mitigation measures; medical countermeasures; health care system preparedness and response activities; communications and public outreach; scientific infrastructure and preparedness; and domestic and international response policy, incident management, and global partnerships and capacity building.

State Plans

Minnesota Department of Health. (n.d.)

High Consequence Infectious Disease (HCID) Toolbox for Frontline Health Care Facilities

Provides editable tools for frontline facilities to prepare and respond to patients who may have a high consequence infectious disease.

Pandemic Ethics Project.

While not a pandemic response plan, this resource describes the outcome of a project conducted by the Minnesota Department of Health looking at the ethical framework for rationing supplies in the event of a pandemic.

Local Plans

This plan describes the goals, objectives, strategies, and responsibilities necessary to provide a coordinated, system-based healthcare response to a range of emerging infectious disease events within Los Angeles County.

This document provides guidance for emergency departments and outpatient clinics to develop screening and isolation protocols for patients possibly infected with a highly communicable disease of public health concern. The document focuses on initial patient identification, initial infection control measures, notification and patient evaluation, and identification and management of exposed persons.

This plan contains the following sections: command, plans section (by unit), operations section, logistics, and finance. Four annexes that focus on different threats are included, as are sample forms and other appendices.
