Disaster Available Supplies in Hospitals: Demonstration of the DASH Tool

John Hick, MD Hennepin Healthcare and ASPR TRACIE Senior Editor

DASH Background & Purpose

- Created in response to technical assistance requests.
- Resources exist for planning and training, but gap remained in quantifying supplies needed by hospitals.
- Collaborative effort of ASPR TRACIE, Healthcare Ready, the Region VII Disaster Health Response Ecosystem, & Health Industry Distributors Association.

HOSPITAL PHARMACY

PERSONAL PROTECTIVE EQUIPMENT

BURN SUPPLY

TRAUMA SUPPLY

Welcome to the Disaster Available Supplies in Hospitals (DASH) Tool

Disaster Available Supplies in Hospitals (DASH) is an interactive tool that can help hospital emergency planners and supply chain staff estimate supplies that may need to be immediately available during various mass casualty incidents (MCI) and infectious disease emergencies based on hospital characteristics. DASH recommends average

DASH Tool User Experience Feedback

- Which modules are used?
- How long does it take to complete a module?
- Are the recommendations in line with what hospitals have in stock?
- Is the level of effort to complete the DASH Tool worth it?
- How is the DASH Tool being used for hospital or regional planning?
